你好：

第一次运行结果

```
./cli.exe 192.168.0.100 7316 102 '[1, "LTC", "deposit", 10001, "100000", {}]'
{
  "id": 0,
  "error": null,
  "result": {
    "status": "success"
  }
}
```

第二次得到

```
./cli.exe 192.168.0.100 7316 102 '[1, "LTC", "deposit", 10001, "100000", {}]'
{
  "id": 0,
  "error": {
    "message": "repeat update",
    "code": 10
  },
  "result": null
}
```

查看代码是下面返回了-1

```
int update_user_balance(bool real, uint32_t user_id, const char
*asset, const char *business, uint64_t business_id, mpd_t *change,
json_t *detail)
{
  struct update_key key;
  key.user_id = user_id;
  strncpy(key.asset, asset, sizeof(key.asset));
  strncpy(key.business, business, sizeof(key.business));
  key.business_id = business_id;

  dict_entry *entry = dict_find(dict_update, &key);
  if (entry) {
    return -1;
  }
}
```

.....

请问这样设计的逻辑是什么？

//////////

另外，是否有情况发生这样的事，有人攻破进入martchmachine部署的服务器,随意修改balance,然后随意下单，引起市场价格剧烈波动。

防止重复入账。

问题是，如果真的是连续充值同一个币种两次，怎么处理呢？

yuliyuanchn commented on Apr 14, 2018

"deposit", 10001

這兩個參數，第一個是業務類型，第二個是業務ID，如果都是充值，換個業務ID就可以了

业务类型和业务ID是对应的吧，你的意思是10001是递增的？
